February 24, 2011. Roseburg, OR – Willowood USA announced today the company has received California state registration on its new line of spray additives for the agricultural industry in the U.S.

Spray additives typically are used in conjunction with crop protection products to provide the most cost effective control of damaging weeds, insects and diseases that can affect the value of your crop. They insure the dollars spent on crop protection are being used to effectively spread, penetrate, buffer and protect the farmer's investment.

Joe Middione, Vice President Sales and Marketing, Willowood USA states, "Willowood USA recognizes the important role that spray additives play in today's complex agricultural practices. Through extensive research and testing, Willowood USA has developed a broad line of spray additives formulated to enhance spreading, sticking, penetration, protection and even stabilization of your crop protection dollars". Willowood USA recently received California registration for: Willowood Buffer, Willowood Spreader, Willowood Sticker, Willowood Buffer Spreader, Willowood COC and Willowood Driftguard.

Production of Willowood USA's spray additives has begun with the first products available by early March of 2011. Additional Spray Additives soon to be launched include: Willowood MSO, Willowood AMS, and Willowood OrganoSil.

Willowood USA currently has registered and is producing a number of high quality post patent crop protection alternatives including: Ethofumesate 4SC, Pronamide 50WSP, Tebucon 3.6SC, Tebucon DF, Propicon 3.6EC, Oxyflo 4SC and 2EC and Glyphosate 41%. “Spray Additives are an important addition to our growing line of crop protection products,” says Middione.

Willowood USA is a U.S. based manufacturer of post patent crop protection herbicides, fungicides, insecticides and spray additive products for the agriculture industry. For more information on the complete line of Willowood USA products, go to www.willowoodusa.com.
