# PROPICON 3.6EC

PROPICONAZOLE | FUNGICIDE

## BENEFITS

- Cost effective disease treatment
- Mode of action (DMI) works well in a resistance management program
- Absorbed through leaves and blossoms
- Steady, reliable disease control
- Curative and preventative disease activity
- Excellent crop safety

**Propicon 3.6EC** is an effective fungicide to control major foliar fungal diseases that can quickly destroy your crop if not treated immediately. Additionally, proper application of **Propicon 3.6EC** will help you achieve maximum yield potential and an excellent return on investment.

A preventive application is recommended as disease travels quickly and is often difficult to detect.

Mode of action: **Propicon 3.6EC** possesses systemic and some curative properties against certain diseases and prevents fungal cell growth by inhibiting sterol biosynthesis. Post-infection activity may limit disease establishment during early stages of development.

## PROTECTED CROPS:

Almonds	Cherries	Leek	Peanuts	Soybeans
Apricot	Chestnut	Lemons	Pecans	Spearmint
Bananas	Cilantro, (Leaf)	Lime	Peppermint	Strawberries
