May 8, 2012. Roseburg, OR – Willowood USA announced today that the EPA has approved both it's technical and end-use registrations for Willowood Bromacil.

Willowood Bromacil is an effective preemergent non-selective herbicide that provides control of key weeds in citrus as well as perennial vegetation on non-crop sites. In addition, Willowood Bromacil is a dependable tool used to knockdown tough annual weeds such as kochia, pigweed and Russian thistle. Willowood Bromacil also excels at controlling perennial grasses.

“The Willowood Bromacil registration expands our established product line into the non-crop vegetative management sector’ states Andy King, Willowood USA National Accounts Manager. ‘The Willowood USA product portfolio now extends from traditional row crops (corn, soybean, cotton, rice) and specialty crops (vegetables, tree fruit, grapes) to vegetation management and rights of way.’ King went on to say ‘This new Bromacil registration will lead to a couple of important end use products for our company. Willowood USA continues to set the pace as one of the fastest growing generic crop protection companies in the industry.”

Willowood USA is a U.S. based manufacturer of post patent crop protection herbicides, fungicides, insecticides, plant growth regulators and spray additive products for the agriculture and vegetation management industries. For more information on the complete line of Willowood USA products, go to www.willowoodusa.com.
