July 10, 2014. Roseburg, OR – Willowood USA recently announced that Federal EPA has approved its technical registration for glufosinate.

Willowood Glufosinate 280SL is an effective, fast acting non-selective contact herbicide that provides control of annual and certain perennial weeds in a number of key crops including but not limited to: citrus, stone fruit, tree nuts, and vineyards. With an already approved end use registration, State registrations for Willowood Glufosinate 280SL are already in place in key States including California.

“Our customers have been asking for this product for quite some time” stated Brian Heinze, Willowood USA President & CEO. “ We are very excited to add this critical molecule to our herbicide portfolio and we look forward to meeting the high customer demand for this new product in the Willowood line-up.”

Willowood USA continues to set the pace as one of the fastest growing generic crop protection companies in US agriculture. Adding to it’s existing line-up of herbicides, insecticides, fungicides and plant growth regulators, Willowood USA expects a number of new product registrations in the coming months.

Willowood USA is a U.S. based manufacturer of post patent crop protection herbicides, fungicides, insecticides, plant growth regulators and spray additive products for the agriculture and vegetation management industries. For more information on the complete line of Willowood USA products, go to www.willowoodusa.com.
